The concept of a fin-jet-plane is a great step forward for aircraft design. Being able to control airflow through the wing, it allows high angles of attack and gives a lot more control and maneuverability over a winged air vehicle. It also allows things that a conventional aircraft doesn't typically allow - weapons, external stores, external sensors, etc. However, the downside is, now that an aircraft can achieve high angles of attack, it requires a shield that can allow a stream of air to be blown past the fin. Forces will exist to push the blade of the fin out of the stream of air. A fin without a shield, just bends and deforms into whatever the airflow tries to push it into. With a shield, the purpose is to take on airflow away from the fin, and thus only 'push' the fin into what airflow wants to do - stay on the fin. The problem with a fin without a shield is that it can become unstable at high
