Polyesterurethane based elastomers have properties of being elastic, heat-resistant and flame-retardant. Since they may be prepared from commercially available raw materials such as adipic acid, hexahydrophthalic acid, isophthalic acid, terephthalic acid, and pentaerythritol and can be synthesized by allowing the blend of these compounds to interact with each other in a chemical reaction, polyesterurethane based elastomers are used as a material having favorable characteristics. One of the main reasons for the recent increasing demand of polyesterurethane based elastomers is that there is a high expectation of their wide applicability because these elastomers can be formed into elastic films having high strength and high elasticity and they are also easy to foam. However, there is an opinion that polyesterurethane based elastomers having such properties can be used only in limited applications because of the high hardness and heat resistance of these elastomers. This invention has been made in order to solve the above-mentioned problem and has as its object the provision of polyesterurethane based elastomers in which improved processability is attained and a film prepared from this elastomer can be processed at higher temperatures.ODB/ITFS ODB/ITFS is a database management system similar to SQL-92, the 1992 SQL standard. It was originally developed to provide a database system that would become a reference, or working draft, for the SQL-99 and SQL-2003 standards. ODB/ITFS was written by Andreas Reisigl, and features strongly typed database statements as well as a dynamic type system. An implementation is available in the open-source Portable Operating System Annotation (POSA) database server. SQL/ODB ODB/ITFS differs from SQL-92 by adding explicit types to columns and rows, allowing structural types to be defined using enumerations. The standard is also different in that SQL/ODB is a relational database system, whereas SQL-92 is primarily for object-oriented programming. ODB/ITFS does support procedural languages, but support for class and interface classes is presently limited. The third draft of SQL/ODB is still being developed. During that process ODB/ITFS will continue to evolve. See also SQL-99 SQL-2003 RDBMS References Category:Object
